

# SWITCH GEAR

## FEATURES

- Open-frame solenoid design
- Mechanical assemblies
- Many voltage variants
- Long life
- Infrequent operation
- Unique safety critical operation
- Up to 100 components
- Designed for assembly

## HOW THEY WORK

The solenoid operated trip in switch gear applications 'fire' for a variety of reasons (for example power surge, under voltage) and the Direct Acting Trip mechanism is designed to operate at that time and cut the power.

These units are re-settable and provide a safety critical service to the end user. It is possible for the unit to go several years without use but when it's needed it must work!

Some of our customers offer a product life of 30 years.

## OUR EXPERIENCE

Penny+Giles work with all the major switchgear manufacturers throughout the world. We not only supply solenoids but fully customised assemblies into this market sector.
